1. Definition of Risk Levels

Each of the iOStream components uses different libraries, handling of the SOUP list is described in this document.

Risk levels of iOStream SOUP list items are determined by three factors:

1. Manual risk assessment of individual SOUP items.
2. Automated Project risk score calculated by dependency track.
 1. Anything found above *Medium* is manually checked against and ignored if non-relevant or fixed by corresponding measures (upgrade, patch) if relevant.
3. Automated Docker image vulnerability scan via Trivy within Harbor.
 1. Anything found above *Medium* is manually checked against and ignored if non-relevant or fixed by corresponding measures (upgrade, patch) if relevant.

1.1. Security risk management plan

Refer to <https://precipoint.atlassian.net/wiki/spaces/STREAM/pages/1361215507/Security+Risk+Management+Plan+iO+Stream> for the security risk management plan.

2. SOUP List

2.1. Automatically generated Software Bill of Materials (SBOM) list

1. In order to see the latest SBOM content for all related projects, navigate to <https://hqdeptrck.ad.precipoint.de> and login with your PreciPoint LDAP credentials.
2. The following projects are of interest for iOStream:
 1. **PreciCloudCore** (.NET libraries)
 2. **PP-Streaming** (.NET desktop application)
 3. **Streaming** (.NET signaling server)
 4. **debug.ui** (TypeScript libraries)
 5. **stream.ui** (TypeScript web application)

2.2. Trivy Docker image scan via Harbor

1. All Docker images are scanned for vulnerabilities. Navigate to <https://harbor.ad.precipoint.de/harbor/projects> and login with your PreciPoint LDAP credentials.
2. Click on **Projects** and then the corresponding tag of one the following projects to get a list of vulnerabilities:
 1. **precihub/postgres** (database)
 2. **identity.providers/keycloak** (identity provider)
 3. **precicloud/ims/stream.api** (signaling server)
 4. **precicloud/ims/stream.ui** (web application)

2.3. Manually tracked libraries list

Some external libraries used by the iOStreamApp are **not** tracked automatically but rather manually.

The reason is that these libraries do not come from one central package repository but are rather downloaded as precompiled libraries (headers and .dlls) OR are built by us internally.

These components are reviewed every calendar year. A reviewer needs to manually research (mostly via googling up) were there any issues with the library in question and update the library if necessary.

The result of the review is stored in the: 2.3.1 Manually tracked libraries review list.

ID	Software System / Plugin	Library name	Programming Language	Initial version	Initial Manufacturer / Source Website	Risk Level	Description	Checkup period
C++ libraries								
SOUP-SDA-001	iOStreamApp	NVIDIA Video Codec SDK	C++	12.1.14	https://developer.nvidia.com/nvidia-video-codec-sdk/download	EXT DOC	Nvidia GPU library and API for hardware video decoding and video encoding.	Annually
SOUP-SDA-002	iOStreamApp	spdlog	C++	1.8.2	https://github.com/gabime/spdlog	EXT DOC	Fast, header-only/compiled, C++ logging library.	Annually
SOUP-SDA-003	iOStreamApp	webrtc	C++	5359 (M108)	https://webrtc.googlesource.com/src/	EXT DOC	WebRTC is a free, open software project that provides browsers and mobile applications with Real-Time Communications (RTC) capabilities via simple APIs. The native static library is built (internally within the company) on the basis of an opensource, google maintained implementation of WebRTC. A company internal guide describing how building works may be found in the [webrtc_building guide] (../webrtc_building.md#how-to-build-webrtc-on-windows-10-machine-by-ik). NOTE: Third party libraries used by WebRTC such as libyuv andopenh264 are also handled in the scope of this SOUP item (as they are used for compiling this SOUP item).	Annually

2.3.1. Manually tracked libraries review list

ID	Library name [Name]	Version checked [Version]/th>	Manufacturer / Website [Link]	Reviewer [Name Surname]	Review date [DD.MM.YYYY]	Review result [PASS/FAIL]	Additional comments
Annual review 2024							
SOUP- SDA- 001	NVIDIA Video Codec SDK	12.1.14	https://developer.nvidia.com/nvidia-video-codec-sdk/download	Ivan Kovac	16.12.2024	PASS	No comments.
SOUP- SDA- 002	spdlog	1.8.2	https://github.com/gabime/spdlog	Ivan Kovac	16.12.2024	PASS	No comments.
SOUP- SDA- 003	webrtc	5359 (M108)	https://webrtc.googlesource.com/src/	Ivan Kovac	16.12.2024	PASS	No comments.
Annual review 2025
