

1 Controlled Information Basis

ENGINEERING SOURCES

May ground engineering evidence

CONTEXT SOURCES

Support interpretation; no evidence authority

2 Source-grounded Interpretation

PROBABILISTIC

Source-grounded Evidence

linked to source and context

Canonical Engineering Subjects

Literal

source-faithful

Systems Engineering

interpretation

Skeptical

ambiguity check

Consensus - Variance - Uncertainty

3 Human Engineering Authority

HUMAN DECISION

Human Engineering Review

Approved Engineering Information

4 Controlled Model Formation

Model Placement

and representation

Model Authority

human decision

Internal Model

and target formulation

Engineering meaning, model placement and target-model formulation remain distinct responsibilities

5 Deterministic Target Transformation

DETERMINISTIC

Deterministic SysML v2 Generation

Technical Validation

Human Model Review & Release

Technical validity does not imply engineering correctness

CROSS-CUTTING: Provenance - Traceability - Explicit Authority - Fail-closed transitions
